

Last thoughts..

Were you aware that every year Americans purchase over a billion incandescent light bulbs?

A 60-watt incandescent light bulb lasts about 750 hours. A compact fluorescent bulb (CFL) with 1/3 the wattage will generate the same light and burn for 7500 to 10,000 hours.

By changing your bulbs to CFLs you would be helping save more than \$600 million in annual energy costs in the U.S.

Symbols

If you see this symbol you will know that the products meet the strict energy efficiency guidelines set by the EPA and U.S. Department of Energy.

Products carrying the Green Seal certification mean the products meet strict environmental testing and evaluation standards.

The Recycled symbol identifies products made from recycled materials. Look for items with the highest amount of post-consumer content.
